

Vehicle Care & Maintenance

Thank you for purchasing your vehicle graphics from Newfax Corporation. The more you care for your vehicle graphics, the better it will look and last. The warranty is prorated so we recommend you review the following suggestions for good care and maintenance for your vehicle graphics.

1. Car/Truck Wash - It is recommended that you hand wash your vehicle graphics with mild, non-abrasive soap/detergent.

2. Pressure Wash - When we install graphics on a vehicle we always install the panels from the back to front, and overlap each panel by 1-2". This installation procedure helps prevent the vinyl from peeling back when driving fast and if our vehicle brushes against branches etc. As a result you must always pressure wash your vehicle from front to back, and always keep the wand at an angle to the vehicle (**do not point the wand straight at the graphics**). Never get closer than 20" with the wand or you risk blowing holes in the vinyl. Any auto wash soap will work fine on the vehicle. For tough stains and dirt, please use a brush. **DO NOT PRESSURE WASH YOUR WINDOW PERFORM** or you will rip it apart.

3. Wax - We highly recommend you wax your vehicle once a year (or more) to maintain the high shine and the life of the vehicle graphics. The best wax is a liquid. This makes it easier to apply. In most cases wax will take out the stains you might get in the graphics.

4. Snow Removal - *Only use a brush, never use a scraper as this could damage the film.* If you wax the film (the solid film, not the window perform), the snow should just come off with very little effort. During the winter **NEVER SCRAPE THE WINDOWS**, this will remove the film and void the warranty). It is always best to use a soft brush on the windows to remove snow. Use a soft brush with soap and water to wash the window film.

5. Window Wipers - **DO NOT EVER USE THE REAR WINDOW WIPERS ON THE WINDOW FILM**, if you do this it will void the warranty and damage the film
